EDUCATION

Monash University

March 2025 – November 2027

Bachelor of Computer Science | WAM: 79.6 | GPA: 3.58

Melbourne, VIC

- Relevant Coursework: Data Structures & Algorithms, Discrete Mathematics, Python Programming, Cybersecurity
- Activities: Monash Consulting Club, Coding Club, Startups Club, Game Design Jam participant

Lahore Grammar School

2022 – 2024

A-Levels: Mathematics

Lahore, Pakistan

- STEM Society member: organised 6+ coding and robotics events for 50+ participants; tutored 15+ students in mathematics and ICT

EXPERIENCE

Boeing

Aug 2026 – Present

Software Engineering Intern, Factory Systems (Industry Based Learning)

Melbourne, VIC

- Selected for a competitive Industry Based Learning placement (Aug–Dec 2026) with the Factory Systems team in Boeing's Soft Tech division, supporting the software that underpins manufacturing operations
- Contribute to development, testing, and maintenance of internal factory systems tooling within an established engineering workflow of code review, version control, and release process
- Work alongside engineers and production stakeholders to translate shop-floor requirements into software changes, in an environment where traceability and correctness are non-negotiable

Docaroo

Early 2026 – Present

Co-Founder & Chief Technology Officer

Melbourne, VIC

- Lead all technical development of a telehealth platform that has served ~1,500 patients since launch, owning architecture, release cycles, and infrastructure spend
- Built end-to-end consultation flow using Next.js, Supabase, Daily.co video, and Stripe payments, including automated medical certificate generation and clinician dashboards
- Designed data handling and access controls around patient records; partnered with a practising GP co-founder to align product decisions with clinical workflow
- Set technical roadmap and prioritised features against acquisition cost, retention, and clinician throughput

Yakiamotors

Mid-2025 – Present

Co-Founder

Melbourne, VIC

- Bootstrapped vehicle arbitrage business from AUD \$3,200 in borrowed capital to ~\$38,000 capital base (10x+) across 35+ flips, generating \$35,000+ in gross revenue with zero external investors
- Applied build-measure-learn cycles and data-driven pivots; identified losing pattern in high-mileage German vehicles after two \$1,000+ losses and repositioned to Japanese-make city cars, improving margins to 20–65%
- Designed product spec for FlipIQ: a deal-scoring tool with listing alert engine, Carsales AMV auto-comparison, team Kanban pipeline, and flip analytics database; prioritised features using RICE framework
- Manage all financial operations, capital allocation, pricing strategy, and company registration across a 3-person equal-partner team

Global Fitness and Leisure Pty Ltd

July 2025 – Present

B2B Account & Client Solutions Specialist

Melbourne, VIC

- Promoted to own the ElitePass B2B channel end to end, managing corporate and gym-operator accounts from first enquiry through quoting, order fulfilment, and post-installation support
- Build tailored equipment proposals across saunas, cold plunge, massage chairs, and cardio ranges; advise clients on fit-out, servicing, and warranty considerations before purchase
- Maintain the ElitePass order pipeline in NetSuite and coordinate with warehouse and logistics teams to keep delivery commitments accurate

Client Solutions & Operations Analyst

July 2025 – Early 2026

- Resolved 40+ customer inquiries weekly with 95% first-contact resolution across NetSuite, eBay, and Amazon platforms
- Analysed 200+ monthly complaints and returns; presented insights at weekly sales meetings, reducing return rates by 12%

PROJECTS

WHOOP Companion | *Dart, Flutter, Bluetooth LE* | [View Project](#) 2026

- Shipped a companion app that keeps a WHOOP 4.0 band fully usable without the vendor subscription; pairs over Bluetooth and computes recovery, strain, sleep staging, and HRV on-device, so sensor data never leaves the phone
- Built in Dart/Flutter on top of the open-source OpenStrap project, which separates the band's protocol decoder, the metrics layer, and the application into distinct modules; contributed within that architecture rather than around it
- Extended the upstream app with resistance-training logging, nutrition tracking, weather context, and AI coaching derived from the raw sensor stream
- Complete and in daily use, with updates shipped on an ongoing basis; cross-platform across iOS and Android

STORMCAST | *TypeScript, React, Electron, Python, ECMWF* | [View Project](#) 2026

- Built and shipped a commercial cross-platform desktop trading terminal for weather markets; ingests the 51-member ECMWF ensemble forecast for ASOS airport stations to generate calibrated probability distributions rather than point estimates
- Engineered an Electron and React front end over a Python forecasting engine across a local IPC bridge (47 TypeScript modules, 14 Python modules), with fractional Kelly position sizing, paper-trading P&L tracking, and calibration analytics
- Shipped 4 releases with signed macOS, Windows and Linux builds, delta auto-updates via electron-updater, machine-bound licence activation, and OS keychain credential storage

CodeProof | *TypeScript, VS Code Extension API, SQLite, Gemini* | [View Project](#)

- Built a VS Code extension (9,000+ lines of TypeScript) that records a coding session as it happens and proves the record was not edited afterwards; snapshots the workspace on an interval and links each one into a SHA-256 chain, so any retrospective edit invalidates every downstream record
- Engineered a local SQLite event store, a replay player that scrubs through a session like video, and a flag analyser that surfaces large pastes and structural jumps for human review
- Integrated the Gemini API for development narratives and shipped PDF report export; fully local-first, with no data leaving the machine

Yakiamotors | *Product Management Case Study* | [View Case Study](#)

- Full PM case study documenting the build of a vehicle arbitrage business from \$3,200 to ~\$38,000 capital base; covers TAM/SAM/SOM sizing, RICE prioritisation, build-measure-learn cycles, and the product roadmap for FlipIQ
- Documents the pivot decision from German to Japanese-make inventory, including the loss data that triggered it and the margin outcome that validated it

VOLUNTEER WORK

Code for Pakistan Feb 2023 – Dec 2023

Community Tech Educator

Remote

- Delivered weekly Python and data literacy workshops to underserved youth; designed curriculum modules balancing technical content with real-world applications
- Assessed student progress and adapted instruction based on individual learning gaps, contributing to the organisation's mission of democratising access to technology education

Edhi Foundation Aug 2022 – Dec 2022

Disaster Relief Volunteer

Pakistan

- Supported logistics coordination during 2022 Pakistan flood relief operations; managed supply chain for food, water, and medical resources across multiple distribution points for displaced communities
- Collaborated with local teams to assess community needs and prioritise resource allocation; documented operational gaps to inform future disaster response planning

HONOURS AND AWARDS

IIUI National Case Competition, Runner-Up December 2025

- Competed against 30+ teams in 48-hour competition; developed strategy projecting 25% revenue increase and margin improvement from 8% to 15%

SKILLS

Technical: Python, SQL, Excel (Advanced), NetSuite, Streamlit, Dart/Flutter, TypeScript, Next.js, Supabase, HTML/CSS, Data Analysis, Data Visualisation

Business: Product Thinking, RICE Prioritisation, Case Analysis, Stakeholder Communication, Process Improvement

Languages: English (Fluent), Urdu (Native)
